

## Fuji starts evaluation of "Left Behind Prevention System" developed in-house for buses used by English After School, *teracoya THANK*

Fuji Corporation (headquarters: Chiryu, Aichi, Japan; Chairman and CEO: Nobuyuki Soga) has developed its own "Left Behind Prevention System" for the buses it uses to take children to and from its own English after school, *teracoya THANK*. Testing of the system has started from December 2022.

*How the left behind prevention system works*

*School bus*

*Inside*

### Features of "Left Behind Prevention System"

From December 2022, testing has started of the new "Left Behind Prevention System" inside the two school buses used to transport children to and from Fuji's English after school, *teracoya THANK*.

The buses run mainly between after-school programs and *teracoya THANK*. Developing the system will allow the safer transport of children as well as contributing to future product development by providing valuable knowhow in performing evaluations.

- Temperature-sensitive motion sensors (detect movement from temperature differences between a person and their surroundings)
- "Left Behind Prevention System" turns on when engine of bus is started
- Detection results go via the cloud to trigger emergency calls or notifications to specific numbers

### Future developments

Fuji's corporate purpose is to "Enrich the lives of those in the world around us". We look to achieve this goal not just through our existing businesses, but by innovating in new areas. The "Left Behind Prevention System" is just part of our efforts to develop products that protect children, who are our future. Fuji will continuously strive to provide products and services that excite and inspire.
